100 Stars 100 Stories

Astronomy and symbolic reflection

The complete collection of one hundred EAJB Star Oracle stories

English edition
Revision 5
12 November 2026

From our Sun to the nearby stars, this book brings each of the deck's one hundred identities together with a short astronomical introduction and a reflection for daily life. Read it in order or return to the story associated with your Oracle card.

Prepared for EAJB. Includes original creative reflections used in the EAJB Star Oracle collection. Scientific organisations cited in this book do not endorse the Oracle interpretations.

EAJB

Our journey begins on Mother Earth

Imagine standing outside on a clear evening. Some of the lights above you are familiar, while others are too faint for your eyes to find. Our journey begins beneath that sky, on a planet warmed by the Sun. Astronomy gives us ways to describe the stars. Storytelling gives us ways to consider what their variety brings to mind.

This edition provides a story for every one of the one hundred card identities in the EAJB deck. It retains the established card numbering, including individual components of multiple-star systems. The order is a guide to the deck, not a claim to be the definitive ranking of the hundred nearest stars.

An astronomical introduction comes first in each entry. The symbolic reflection then turns to human experience. Those reflections are creative interpretations: a star's catalogue name, light or physical properties do not establish a personal prediction. You may approach the reflection through your own spiritual outlook while keeping this distinction clear.

Using the reflections responsibly

Tarot and Oracle readings offer symbolic guidance for personal and spiritual reflection. They explore possibilities and do not guarantee future events or outcomes. They do not replace qualified medical, mental health, legal, or financial advice. Use your own judgment when making decisions, and seek appropriate professional support where needed.

About this edition

This book was developed with AI assistance and editorial checks against the sources listed at the end. All one hundred reflections are included. The approximate distances preserve the scale of the supplied deck, with specified corrections. They are not a replacement for an individually verified, current astronomical catalogue.

The earlier Revision 4 contained ten sample stories. This edition replaces that sample section with the full collection. The English text is the master edition for later translations.

EAJB

Reading the astronomical profiles

A light-year measures distance, not time. It is the distance light travels in one Julian year of 365.25 days: approximately 9.46 trillion kilometres. A star ten light-years away is seen through light that has travelled for about ten years. [23, 24]

Multiply light-years by 9.4607304725808 to obtain trillion kilometres. The kilometre figures here are calculated from the rounded light-year values, so they are illustrations of scale rather than more precise measurements. The Sun is shown at the mean Earth-Sun scale of approximately 150 million kilometres. [4, 23, 24]

The main sequence spectral classes run from hotter O and B stars through A, F, G and K to cooler M stars. Red dwarfs belong to the M group. A white dwarf is a compact stellar remnant, a different evolutionary category. A brown dwarf is a substellar object; the deck does not give such companions separate cards. [2, 3]

What a card contains

Each entry gives the card number and star name, a broad stellar category, an approximate distance, an astronomical introduction and its source number. The symbolic reflection, suggested action and question are creative EAJB content. They are not findings of the astronomical sources.

How to use this book

Start with the star you drew, or choose an entry that interests you. Read its astronomical setting before considering the reflection. Take what helps you think more clearly; you do not need to force every sentence to fit. A useful question may be more valuable than an immediate conclusion.

Distance note: uncorrected figures are rounded legacy deck values. Component distances have been harmonised where noted in the editorial record. Three entries retain a neutral catalogue description rather than an unverified spectral classification.

EAJB

Contents and card groups

The collection follows the deck sequence. Each pair of stories occupies one page; the table below gives the first page of each group.

Cards	From	Page
001 to 010	Sun	5
011 to 020	Luyten 726-8 A (BL Ceti)	10
021 to 030	61 Cygni A	15
031 to 040	Gliese 1061	20
041 to 050	Ross 614 A	25
051 to 060	LHS 292	30
061 to 070	Gliese 412 B (WX Ursae Majoris)	35
071 to 080	70 Ophiuchi A	40
081 to 090	Gliese 251	45
091 to 100	Gliese 752 A	50

Distance reference list 55
Editorial record 59
Sources and further reading 60

A note on stellar images

No imaginary landscape is presented here as a telescope photograph. The EAJB emblem is supplied brand artwork. If card illustrations are added in a later edition, they should be identified as artistic interpretations and kept separate from scientific observations.

Public PDF: the EAJB mark is merged with each page image to discourage casual removal and direct text extraction. The editable Word master is intended for EAJB use. A watermark cannot prevent screenshots, OCR or determined editing.

001 Sun

G type star / 150 million kilometres from Earth on average

The Sun is the star that makes this journey possible. Its energy warms Earth and supports the conditions on which our lives depend. Begin here, with the familiar light outside your window, before imagining the more distant stars. [4]

Renewed Light

Let warmth return to something you have neglected.

This card invites you to notice what nourishes your enthusiasm. You may have spent so long meeting obligations that pleasure feels like a luxury. Make room for one source of genuine interest; renewed energy often begins with attention, not a complete change of life.

Suggested action Spend ten minutes on something you enjoy without measuring its usefulness.

Question to consider What helps me feel more alive?

002 Proxima Centauri

Red dwarf / About 4.2 light-years / 39.7 trillion kilometres

Proxima Centauri is the nearest star beyond the Sun. Its faintness hides it from unaided eyes, while observations reveal a planetary companion, Proxima b. Nearness does not always make something obvious; instruments can reveal what ordinary sight misses. [5]

The Next Step

Your nearest opportunity may already be within reach.

Looking too far ahead can make a possible beginning seem insignificant. Consider the resources, skills and people already close to you. You do not need certainty about the whole journey to take a modest, informed step. Begin where you can see enough to move.

Suggested action Write down one available opportunity and its simplest first step.

Question to consider What am I overlooking because it seems too ordinary?

EAJB

003 Alpha Centauri A

G type star / About 4.4 light-years / 41.6 trillion kilometres

Alpha Centauri A is the more Sun-like member of the bright Alpha Centauri pair. Measurements of its angular size allow a comparison with our own star. A familiar kind of object becomes newly interesting when examined closely. [6]

Shared Direction

A shared purpose grows stronger when it is spoken clearly.

Cooperation becomes difficult when everyone assumes they want the same thing. This card invites you to name your priorities and listen for the priorities of another person. Agreement need not mean identical methods. Find the purpose you share before discussing how to reach it.

Suggested action Ask someone what matters most to them in a shared task.

Question to consider Where do our intentions meet?

004 Alpha Centauri B

K type star / About 4.4 light-years / 41.6 trillion kilometres

Alpha Centauri B is smaller and cooler than A. The pair shares a stellar system with Proxima Centauri. Their different properties make this nearby family a useful place to consider how distinct companions can belong to one larger whole. [6]

Room for Difference

Connection can hold two distinct points of view.

You may feel pressure to agree in order to preserve harmony. This card offers permission to remain thoughtful and separate within a relationship. Express your view without turning difference into a contest. A useful conversation allows both people to be heard, even when agreement takes time.

Suggested action State one preference kindly and without apologising for having it.

Question to consider Can I stay connected while being honest?

EAJB

005 Barnard’s Star

Red dwarf / About 6.0 light-years / 56.8 trillion kilometres

Barnard's Star changes its apparent position across the sky unusually quickly. This proper motion is angular movement, not a claim that it has the greatest speed through space. Repeated measurements reveal a journey invisible during one brief look. [7]

A Patient Journey

The pace of your progress does not determine its worth.

Comparison can turn steady work into a feeling of falling behind. Look at the distance you have travelled using your own starting point. Patience becomes useful when it supports continued effort. Let your next action be small enough to repeat, rather than impressive enough to display.

Suggested action Record one change you have made since last month.

Question to consider How would I measure progress without comparing myself?

006 Wolf 359

Red dwarf / About 7.9 light-years / 74.7 trillion kilometres

Wolf 359 belongs to the small, faint stellar population close to the Sun. Imagine placing its catalogue entry beside a bright star's: each deserves its own page. The symbolic story below considers courage that does not depend on visibility. [1]

Quiet Courage

You can act bravely without making a grand announcement.

A difficult step may be waiting beneath everyday hesitation. Courage here means choosing a manageable act despite discomfort, not forcing yourself beyond your limits. Give the decision a clear boundary. You may discover that beginning quietly is more sustainable than waiting to feel completely fearless.

Suggested action Take one safe, small step toward a conversation or task you have avoided.

Question to consider What could I do while still feeling nervous?

EAJB

007 Lalande 21185

Red dwarf / About 8.3 light-years / 78.5 trillion kilometres

Lalande 21185 carries a catalogue name rather than a familiar mythological title. A number can help an observer find the same object again. In this book it becomes the beginning of a personal reflection on what deserves attention today. [1]

Enough for Today

A realistic measure of enough can protect your energy.

An expanding list of duties can make every day feel unfinished. This card asks you to distinguish what matters today from what can wait. Setting a limit is part of responsible planning. Finish a few meaningful things and allow the remaining work to have its own time.

Suggested action Choose three priorities and set a stopping time.

Question to consider What would make today sufficient?

008 Sirius A

A type star / About 8.6 light-years / 81.4 trillion kilometres

Sirius A is the brightest star in Earth's night sky. Its much fainter companion, Sirius B, makes the system a striking study in contrast. What catches the eye first is only part of the scene. [8]

Being Seen

Let your work be visible without asking it to prove your worth.

You may be ready to share an idea, contribution or achievement. Visibility can feel uncomfortable when you confuse being noticed with being judged. Offer something concrete and let others respond. Their reaction can provide information, but it does not define the value of your whole self.

Suggested action Share one piece of work with someone whose feedback you trust.

Question to consider What am I ready to show?

EAJB

009 Sirius B

White dwarf / About 8.6 light-years / 81.4 trillion kilometres

Sirius B is a compact stellar remnant with roughly the Sun's mass packed into a body comparable in size to Earth. Its present form belongs to a different stage of stellar life from its brilliant companion's. [8]

Lasting Value

An experience can change form and still remain meaningful.

Something that once held your attention may be ending or becoming quieter. This card invites you to recognise what it gave you without demanding that it continue unchanged. Keep the lesson, skill or affection that remains useful. Making room for the present does not erase the past.

Suggested action Write one thing you want to carry forward from a past chapter.

Question to consider What remains valuable after change?

010 Luyten 726-8 B (UV Ceti)

Red dwarf / About 8.7 light-years / 82.3 trillion kilometres

UV Ceti is the B component of the Luyten 726-8 pair. Its alternative name and component letter identify the same star in different contexts. The card invites a symbolic look at the small spark that begins a creative response. [1]

Creative Spark

Give a fresh idea a small place to begin.

Inspiration can arrive before you have a practical plan. You do not have to reject the idea or commit your whole future to it. Treat it as an experiment. A modest trial will reveal more than prolonged imagining, and it can remain worthwhile even if you choose a different direction.

Suggested action Make a rough version of one new idea.

Question to consider What would I try if it only had to be a first draft?

EAJB

011 Luyten 726-8 A (BL Ceti)

Red dwarf / About 8.7 light-years / 82.3 trillion kilometres

BL Ceti is the A component of the same pair as UV Ceti. Keep the two names distinct when following the deck. Here, the companion entry turns our attention toward the warmth of a practice maintained over time. [1]

Steady Warmth

Consistent attention can strengthen what excitement begins.

A relationship, habit or project may need ordinary care more than a dramatic gesture. This card asks where a simple repeated action would make a difference. Choose something you can actually sustain. Trust is often built through small promises kept over time, including promises you make to yourself.

Suggested action Choose one small act of care to repeat this week.

Question to consider Where would consistency matter most?

012 Ross 154

Red dwarf / About 9.7 light-years / 91.8 trillion kilometres

Ross 154 is a nearby red dwarf. Set aside the expectation that a star must dominate the sky to merit a story. Its place in this collection gives us a quieter starting point for thinking about a gentle reset. [1]

A Gentle Reset

You are allowed to begin again with what you know now.

A disrupted routine does not mean the whole effort has failed. Look for the point where restarting becomes practical. Reduce the scale if necessary and remove one obstacle. The purpose is to restore movement, not to punish yourself for the interruption or recreate an ideal beginning.

Suggested action Restart one habit in a version that takes five minutes.

Question to consider What would make beginning again easier?

EAJB

013 Ross 248

Red dwarf / About 10.3 light-years / 97.4 trillion kilometres

Ross 248 is another of the deck's red dwarfs. Its short catalogue name leaves room for curiosity rather than an elaborate legend. Imagine beginning with a nearly blank notebook and allowing a more spacious question to emerge. [1]

Open Space

A pause can reveal possibilities that busyness hides.

When every moment is filled, even useful choices can become automatic. This card invites you to leave a little space before the next commitment. Notice what emerges when you stop rushing to fill the gap. Rest, reflection or a changed priority may deserve that space more than another task.

Suggested action Leave ten minutes unscheduled and put your phone aside.

Question to consider What do I notice when I stop filling every gap?

014 Epsilon Eridani

K type star / About 10.5 light-years / 99.3 trillion kilometres

Epsilon Eridani offers a K-type counterpart to our G-type Sun. The classification is a scientific description, not a personality. Let the difference become an invitation to ask a useful question rather than assume that familiar examples explain everything. [1]

Useful Curiosity

Let a good question lead you beyond a familiar assumption.

You may be treating an old explanation as the only possible one. Curiosity allows you to investigate without deciding too early. Ask for an example, check a detail or hear another perspective. Learning something new may refine your view rather than overturn it, and that is still progress.

Suggested action Ask one sincere question about something you think you already understand.

Question to consider Which assumption deserves another look?

EAJB

015 Lacaille 9352

Red dwarf / About 10.7 light-years / 101.2 trillion kilometres

Lacaille 9352 is also known as GJ 887. A planetary companion, GJ 887 b, was announced in 2020. The discovery offers a concrete reason to look beyond a small point of light and ask what might accompany it. [12]

Simple Foundations

Care for the basics before demanding more of yourself.

A complicated problem may be harder to face when your everyday needs are neglected. This card invites a practical inventory of time, nourishment, rest and surroundings. Basic care will not solve everything, but it can give you a steadier starting point. Make one ordinary condition more supportive.

Suggested action Improve one basic part of your day, such as a meal or your workspace.

Question to consider What foundation needs attention?

016 Ross 128

Red dwarf / About 11.0 light-years / 104.1 trillion kilometres

Observations revealed an Earth-mass planet around Ross 128, announced in 2017. A temperate orbit is not evidence of inhabitants or confirmed surface water. The discovery opens a question; careful observation determines how much of an answer is justified. [11]

Listening Within

A quiet preference deserves to be heard before you decide.

Advice from others can be useful, yet too many opinions may obscure your own priorities. Pause long enough to describe what you want and why. Your inner response is one source of information, not an automatic answer. Bring it into the decision alongside the practical facts.

Suggested action Write your own preference before asking anyone else for advice.

Question to consider What do I think before I hear other opinions?

EAJB

017 EZ Aquarii A

Red dwarf / About 11.1 light-years / 105.0 trillion kilometres

EZ Aquarii A is one of the deck's three EZ Aquarii entries. The letters help us keep neighbouring identities separate. Read the three cards as a set of distinct reflections, beginning here with the experience of belonging. [1]

A Place to Belong

Belonging grows through participation as well as acceptance.

You may be waiting to feel completely comfortable before joining in. This card invites a modest contribution to a group or community you value. You need not become someone else to take part. Offer what is natural to you and notice whether the setting makes room for your presence.

Suggested action Contribute one idea or helpful action to a group you enjoy.

Question to consider Where can I participate as myself?

018 EZ Aquarii B

Red dwarf / About 11.1 light-years / 105.0 trillion kilometres

The B designation keeps this EZ Aquarii entry distinct from A and C. In a catalogue, a small letter can carry essential information. In the symbolic story, a similarly small change in attitude can make receiving support easier. [1]

Receiving Support

You do not have to carry every difficulty alone.

Asking for help can feel unfamiliar when you are used to being dependable. Make the request specific so another person can understand what would help. Support does not remove your agency; it can make your own effort more sustainable. Notice the difference between receiving care and surrendering your choices.

Suggested action Ask a trusted person for one clearly defined kind of help.

Question to consider What support would actually ease my load?

EAJB

019 EZ Aquarii C

Red dwarf / About 11.1 light-years / 105.0 trillion kilometres

EZ Aquarii C completes this deck's EZ Aquarii group. Its separate entry makes room for a different question from those asked by A and B. Consider the part you contribute when you stop trying to perform everybody else's role. [1]

Your Contribution

A small contribution can matter within a larger effort.

You may discount your role because you cannot control the whole outcome. This card asks you to identify the part that is yours to do. Complete it with care and communicate its limits. Shared work becomes more dependable when each person knows both their responsibility and their capacity.

Suggested action Clarify and complete one part of a shared task.

Question to consider What is mine to contribute?

020 61 Cygni B

K type star / About 11.4 light-years / 107.9 trillion kilometres

61 Cygni is a double-star system central to the history of distance measurement. Bessel's successful parallax work was published in 1838. This B-component card approaches the shared story through the value of patient companionship. [13]

Companionable Silence

Connection does not always require an explanation.

You may feel obliged to entertain, advise or solve a problem whenever you are with someone. This card invites a quieter form of company. Listen and allow a little silence before responding. Presence can be supportive without becoming a promise to fix what lies outside your control.

Suggested action Spend time with someone and listen without rushing to offer solutions.

Question to consider When does simple presence help most?

EAJB

021 61 Cygni A

K type star / About 11.4 light-years / 107.9 trillion kilometres

The historical observations of 61 Cygni helped make stellar distance a measurable quantity. Instead of treating the sky as a flat arrangement, observers could begin assigning depth. This A-component card uses that change of perspective to introduce renewed trust. [13]

Returning Trust

Trust can grow through clear actions taken over time.

If confidence has been weakened, a single promise may not restore it. Look for small, observable commitments and realistic expectations. This card invites patience alongside discernment. Notice what people actually do, including yourself, and allow your conclusions to develop from repeated evidence rather than hope alone.

Suggested action Make one promise you can keep and follow through on it.

Question to consider What behaviour helps trust grow?

022 Procyon A

F type star / About 11.5 light-years / 108.8 trillion kilometres

Procyon A belongs to the F spectral class. The letters in a stellar classification describe light, while the A in its name identifies a component. Two different naming systems can both be useful when we know which question each answers. [1]

Clear Expression

Say the essential thing in words you can stand behind.

An important message may be getting lost in explanation, hints or hesitation. Decide what you need the other person to understand. Speak plainly while leaving room for their response. Clarity can be kind: it reduces the burden of guessing and makes a practical next step easier to identify.

Suggested action Write the main point of a conversation in one sentence.

Question to consider What do I need to say clearly?

EAJB

023 Procyon B

White dwarf / About 11.5 light-years / 108.8 trillion kilometres

Procyon B is a white dwarf. Give this entry its own attention rather than allowing the A component's name to stand for the whole system. The symbolic narrative asks what becomes clearer when you return for a second look. [1]

The Second Look

A first impression need not become your final judgement.

You may have reached a conclusion before all the relevant details were available. This card invites review rather than self-criticism. Separate what you observed from what you assumed. A second look may confirm your view or change it; either outcome is useful when the reasoning becomes clearer.

Suggested action Check one detail before acting on an assumption.

Question to consider What have I interpreted without verifying?

024 Struve 2398 A

Red dwarf / About 11.5 light-years / 108.8 trillion kilometres

Struve 2398 A carries both a catalogue identifier and a component letter. Such names make a repeated observation possible without relying on a star's prominence. Its symbolic narrative begins with the ordinary work of maintaining a healthy partnership. [1]

Healthy Partnership

Shared effort benefits from clear responsibilities.

Goodwill alone does not tell people who will do what. This card invites you to discuss the practical structure of a partnership. Name the task, the time available and the limits of each person's role. Clarity creates room for generosity because help can then be offered intentionally rather than expected silently.

Suggested action Agree who will handle one shared responsibility.

Question to consider What needs to be made explicit between us?

EAJB

025 Struve 2398 B

Red dwarf / About 11.5 light-years / 108.8 trillion kilometres

Struve 2398 B is the second of this deck's Struve entries. Keeping its identity separate is a small exercise in accuracy. It also provides an image for the reflection below: respect grows when another person's distinct experience receives attention. [1]

Mutual Respect

Your needs and another person's needs can both matter.

A disagreement may feel like a choice between giving in and winning. Look for a third possibility: understanding the needs behind each position. You may still need a firm boundary. Respect means discussing the difference without reducing either person to an obstacle or making promises you cannot keep.

Suggested action Ask what need sits behind another person's request.

Question to consider How can I honour both people in this decision?

026 Groombridge 34 A

Red dwarf / About 11.6 light-years / 109.7 trillion kilometres

Groombridge 34 A is catalogued under a name that also appears in the companion entry. Reading A and B together need not mean assigning them the same story. Here, the focus is finding balance in your own participation. [1]

Finding Balance

Balance may require adjustment rather than equal portions.

Some areas of life need more attention for a while. This card asks you to notice where your current arrangement has become costly. You do not have to divide your time perfectly. Make one deliberate adjustment and observe whether it improves the whole, instead of demanding an ideal routine immediately.

Suggested action Move a little time from a draining activity to a neglected priority.

Question to consider Which adjustment would help this week?

EAJB

027 Groombridge 34 B

Red dwarf / About 11.6 light-years / 109.7 trillion kilometres

Groombridge 34 B completes the deck's Groombridge 34 pair. A catalogue groups related entries while preserving their differences. Use that image, symbolically, to consider how a boundary can make a connection clearer rather than less caring. [1]

A Firm Boundary

A clear limit can make your generosity more sustainable.

You may be agreeing out of habit while feeling increasingly resentful. Identify the limit that would protect your time or energy. Express it calmly and specifically. A boundary describes what you can offer and what you will do; it does not require the other person to approve your every reason.

Suggested action Practise one respectful sentence that states a limit.

Question to consider Where has an unclear yes become a burden?

028 DX Cancri

Red dwarf / About 11.7 light-years / 110.7 trillion kilometres

DX Cancri is a red dwarf with a compact catalogue name. This entry asks you to pause before attaching a large meaning to a small label. The creative reflection concerns choosing where to direct the energy already available to you. [1]

Directed Energy

Give your effort a destination before increasing its intensity.

Feeling busy can disguise a lack of direction. This card invites you to choose one concrete outcome and remove a competing demand. More force will not always help; better focus may. Put your energy into a step that serves your priority and leave room to assess whether it is working.

Suggested action Work on one chosen task for fifteen uninterrupted minutes.

Question to consider Where would focused effort make the greatest difference?

EAJB

029 Epsilon Indi A

K type star / About 11.9 light-years / 112.6 trillion kilometres

Webb observations directly imaged the cold giant planet Epsilon Indi Ab. The observation gives this nearby system a story beyond the appearance of its host star. It is a reminder that the means of looking can change what becomes visible. [14]

Grounded Independence

You can make your own choice while staying open to advice.

Independence does not require refusing every source of help. This card invites you to take responsibility for a decision after considering useful information. Notice where you are waiting for permission that no one else can give. Choose a reasonable course and remain willing to revise it as you learn.

Suggested action Make one modest decision using your priorities and the available facts.

Question to consider Where am I ready to choose for myself?

030 Tau Ceti

G type star / About 11.9 light-years / 112.6 trillion kilometres

Tau Ceti is a G-type star, the same broad spectral class as the Sun. A shared classification does not make two stars identical. As a symbol, that combination of familiarity and individuality offers a starting point for quiet progress. [1]

Quiet Progress

Small, steady steps can carry you further than a hurried leap.

The light over the sea and the solid coastal cliffs invite you to consider what gives your life stability. You may be looking for a dramatic sign of progress while overlooking the value of your everyday efforts. Recognise what you are already building. Quiet progress still requires movement: choose a manageable action without demanding an immediate result.

Suggested action Spend ten minutes on one task you have been postponing. Aim to begin, rather than finish everything.

Question to consider What small step could I take today that my future self would appreciate?

EAJB

031 Gliese 1061

Red dwarf / About 12.0 light-years / 113.5 trillion kilometres

Gliese 1061 is a red dwarf. The catalogue number identifies a place for further observation rather than closing the subject. Approach its story with the same willingness to investigate something promising before deciding what it must become. [1]

Hidden Possibility

An overlooked option may deserve a fair trial.

Familiar choices can crowd out an alternative before you examine it. This card asks you to look beyond the most obvious route. Consider an option that fits your resources and values, then test it on a small scale. Possibility becomes useful when you connect imagination with a practical experiment.

Suggested action List one alternative approach and a low-cost way to try it.

Question to consider What option have I dismissed too quickly?

032 YZ Ceti

Red dwarf / About 12.1 light-years / 114.5 trillion kilometres

YZ Ceti is a red dwarf whose brief name can be easy to pass over. Give it a moment without demanding a dramatic discovery. The symbolic narrative makes space for play, experimentation and an outcome you do not yet need to know. [1]

Room to Play

Play can loosen a problem that effort alone has not solved.

You may be approaching every activity as something to perform correctly. This card invites a little experimentation without a fixed outcome. Sketch, rearrange or explore for its own sake. Play does not guarantee a solution, but it can reveal choices that disappear when you judge every attempt before it develops.

Suggested action Try a creative activity for ten minutes without evaluating the result.

Question to consider What might I discover if I stop trying to impress?

EAJB

033 Luyten’s Star

Red dwarf / About 12.3 light-years / 116.4 trillion kilometres

Luyten's Star is also catalogued as GJ 273. Alternative names are useful when following an object across different lists. This card's creative theme asks you to notice a helpful signal and then decide what evidence or conversation might clarify it. [1]

A Helpful Signal

Pay attention to feedback that points toward a useful adjustment.

Not every opinion deserves equal weight. Look for a specific observation from someone who understands the situation. This card invites you to use feedback as information rather than a verdict on your character. Choose the part you can act on, and leave vague criticism aside while you assess its relevance.

Suggested action Ask for one concrete suggestion about something you are improving.

Question to consider Which feedback could guide my next step?

034 Teegarden’s Star

Ultracool red dwarf / About 12.5 light-years / 118.3 trillion kilometres

A 2024 study of Teegarden's Star reported a third planet alongside its two previously known companions. The work shows how a nearby system's description can develop as measurements accumulate. A small discovery can alter an otherwise familiar picture. [15]

Small Discoveries

Something modest can change the way you see a familiar situation.

You may be waiting for an unmistakable revelation while ignoring everyday observations. Look closely at what is working, what feels different and what keeps repeating. This card invites patient attention. A small discovery can become meaningful when you connect it to a decision instead of merely collecting more information.

Suggested action Write down one thing you noticed today and why it matters.

Question to consider What has recently become clearer?

EAJB

035 Kapteyn’s Star

Cool subdwarf / About 12.8 light-years / 121.1 trillion kilometres

Kapteyn's Star is catalogued as a cool subdwarf. Its classification gives us a scientific distinction without assigning a human character. The symbolic story uses its individual place in the collection to consider a path that does not depend on comparison. [1]

Your Own Path

A different route can still be a thoughtful route.

Other people's expectations may make your choices look unusual. This card asks whether your direction reflects considered values or only a reaction against pressure. You need not follow a familiar path, but it helps to understand your reasons. Build a route you can explain to yourself with honesty.

Suggested action Name one reason your current direction fits your values.

Question to consider What makes this path mine?

036 Lacaille 8760

K type star / About 12.9 light-years / 122.0 trillion kilometres

Lacaille 8760 provides another K-type entry in the collection. A repeated category can help us organise observations without replacing the individual object. Read its reflection as a prompt to notice the particular form of care that is needed now. [1]

Reliable Care

Practical care can express affection more clearly than a grand gesture.

You may be wondering how to support a person or situation you value. Start by finding out what is actually needed. Small reliable actions often matter more than assumptions about what should help. Offer something within your capacity and allow the recipient to accept, adapt or decline it.

Suggested action Ask someone what small act would make their day easier.

Question to consider How can my care become more useful?

EAJB

037 Kruger 60 B

Red dwarf / About 13.1 light-years / 123.9 trillion kilometres

Kruger 60 B is one of the deck's two Kruger 60 components. Keep the letter attached when comparing entries. In the reflective narrative, that simple act of distinction becomes an image for understanding someone without assuming that you already know them. [1]

Patient Understanding

Give understanding time to catch up with your reaction.

A conversation may have left you hurt, confused or defensive. This card invites a pause before deciding what it means. Revisit the words and the context, then ask a clarifying question if appropriate. Slowing down does not dismiss your feelings; it gives you more information with which to respond.

Suggested action Wait until you feel calmer before drafting a difficult reply.

Question to consider What still needs to be understood?

038 SCR J1845-6357 A

Very cool red dwarf / About 13.1 light-years / 123.9 trillion kilometres

SCR J1845-6357 A has a name that preserves a survey identity and sky position. It may feel less familiar than Sirius, but unfamiliarity is a reason to investigate. The symbolic narrative honours effort that has not received much notice. [1]

The Unseen Effort

Value the work that makes visible results possible.

Planning, practice and maintenance can feel unrewarding because few people notice them. This card invites you to acknowledge that supporting work. Decide which hidden tasks genuinely serve your goals and which have become unnecessary. You can appreciate your effort while still simplifying the process that consumes it.

Suggested action Recognise one behind-the-scenes task and make it easier to repeat.

Question to consider What quiet work deserves recognition?

EAJB

039 Kruger 60 A

Red dwarf / About 13.1 light-years / 123.9 trillion kilometres

Kruger 60 A appears separately from its B companion. Two entries allow one setting to introduce different human questions. Here the question is practical cooperation: what can people do together while keeping their responsibilities clear? [1]

Working Together

Different strengths can make a shared task more manageable.

You may be trying to do everything in the way you know best. This card invites you to notice another person's useful skill and offer your own. Coordination requires communication, not mind-reading. Agree on the next step and allow room for each person's method where the outcome permits it.

Suggested action Divide one task according to the strengths of those involved.

Question to consider What becomes easier when we combine our abilities?

040 DENIS J104814.6-395606

Very cool red dwarf / About 13.2 light-years / 124.9 trillion kilometres

The long DENIS designation is an identifier, not a prediction or a story in itself. It invites a patient reader to look past an awkward name. The creative reflection below concerns exploring a question without needing an immediate conclusion. [1]

Permission to Explore

You can investigate a possibility without promising to pursue it.

An unfamiliar direction may seem intimidating because you treat curiosity as commitment. This card offers a lighter approach. Gather a little information, ask a question or try a short introduction. Exploring helps you decide whether the possibility suits you; it does not oblige you to continue if it does not.

Suggested action Research one interest for fifteen minutes and note your response.

Question to consider What would I explore if I could change my mind?

EAJB

041 Ross 614 A

Red dwarf / About 13.4 light-years / 126.8 trillion kilometres

Ross 614 A is the first component represented in this deck's Ross 614 pair. The catalogue keeps both identities available for study. In the symbolic narrative, the paired entries provide room to think about giving without forgetting the ability to receive. [1]

Give and Receive

A fair exchange includes noticing both sides of the effort.

You may be offering more than you can sustain or overlooking what others already contribute. This card invites a practical look at reciprocity. Discuss needs without turning care into a strict scorecard. A healthier exchange makes room for changing circumstances while allowing persistent imbalance to be named.

Suggested action Identify one exchange that needs a clearer conversation.

Question to consider Where does reciprocity need attention?

042 Ross 614 B

Red dwarf / About 13.4 light-years / 126.8 trillion kilometres

Ross 614 B supplies the second perspective on the Ross 614 pair. Its separate card does not require a separate supernatural influence. It offers a second reading prompt, this time about the rhythm of effort and recovery. [1]

Restoring Rhythm

A disrupted pattern can be rebuilt with a gentler structure.

Your usual routine may no longer fit your current circumstances. This card asks you to adapt rather than force an old arrangement back into place. Choose a dependable anchor, such as a starting time or a short daily task. Let the rest of the pattern develop around what is now realistic.

Suggested action Set one simple anchor for tomorrow's routine.

Question to consider What rhythm fits my life as it is now?

EAJB

043 Wolf 1061

Red dwarf / About 14.1 light-years / 133.4 trillion kilometres

Wolf 1061 is a red dwarf. Read its catalogue identity as an invitation to careful attention, then keep that attention when moving to your own question. The symbolic story is concerned with choosing deliberately instead of allowing urgency to choose for you. [1]

Choose Deliberately

A thoughtful choice can be small and still be consequential.

You may be allowing habit or urgency to make a decision for you. Pause to identify the options, your priority and any information still missing. This card does not demand perfect certainty. It asks you to choose with awareness and to distinguish a reversible experiment from a commitment that needs more consideration.

Suggested action Write two options and one reason for choosing between them.

Question to consider What deserves a conscious decision today?

044 Van Maanen’s Star

White dwarf / About 14.1 light-years / 133.4 trillion kilometres

Van Maanen's Star is a white dwarf. Its classification belongs to stellar evolution; the wisdom we associate with it is our creative response. This reflection asks which lessons remain useful after the experience that first taught them has ended. [1]

Lessons Kept

An old lesson can support you without defining your future.

A past difficulty may have taught you caution, persistence or a useful skill. This card invites you to keep the learning while examining the conclusions you attached to it. One experience does not establish what every new situation will be. Let the past inform your judgement without closing every door.

Suggested action Write one lesson from the past and one assumption you can reconsider.

Question to consider What can I keep without carrying everything?

EAJB

045 Wolf 424 A

Red dwarf / About 14.3 light-years / 135.3 trillion kilometres

Wolf 424 A begins a pair of separate entries in the deck. Use the component letter when returning to its profile. Its symbolic theme concerns a conversation in which listening matters as much as preparing your next reply. [1]

A Kind Conversation

Honesty is easier to receive when it leaves dignity intact.

You may need to raise something uncomfortable. This card invites you to speak about the specific behaviour, its effect and the change you seek. Avoid trying to explain the other person's entire character. A focused conversation can be firm and considerate while giving both people room to respond.

Suggested action Prepare one clear request for a conversation you need to have.

Question to consider How can I be direct and kind at once?

046 Gliese 1

Red dwarf / About 14.2 light-years / 134.3 trillion kilometres

Gliese 1 is a red dwarf whose catalogue number can suggest a beginning to the imagination. That association is a human choice, not the number's scientific meaning. The reflection below considers a fresh start that is small enough to carry out. [1]

A Fresh Beginning

Start with the conditions you have, then improve them as you go.

Waiting for the perfect setting can keep a useful idea suspended. This card invites a beginning that is modest, practical and open to revision. Identify the minimum you need to proceed responsibly. A first step does not have to carry the whole vision; it only needs to make the next step possible.

Suggested action Begin one task using the resources already available.

Question to consider What is enough to get started?

EAJB

047 TZ Arietis

Red dwarf / About 14.6 light-years / 138.1 trillion kilometres

TZ Arietis is a red dwarf. A scientific label describes the object; it does not tell us what to feel. The card's symbolic narrative turns the attention inward and invites you to name a feeling before deciding how to respond to it. [1]

Name the Feeling

A feeling becomes easier to work with when you can describe it.

You may be responding to a vague sense of unease or irritation. This card invites you to distinguish the feeling from the story surrounding it. Naming disappointment, worry or fatigue can clarify what you need. You can acknowledge an emotion without making it the sole basis of your next decision.

Suggested action Write what you feel and one practical need connected to it.

Question to consider What is this feeling asking me to notice?

048 Wolf 424 B

Red dwarf / About 14.3 light-years / 135.3 trillion kilometres

Wolf 424 B completes the pair begun with card 45. The two cards share an astronomical setting while offering different prompts. Here, the focus is the practical repair that can follow an honest, manageable conversation. [1]

Repair in Small Steps

A relationship may benefit from a specific act of repair.

Good intentions can remain vague when something has gone wrong. This card invites you to acknowledge your part accurately and offer a concrete change. Repair cannot guarantee reconciliation, and the other person's response is their own. Focus on an honest contribution rather than trying to control the outcome.

Suggested action If appropriate, acknowledge one mistake and explain what you will change.

Question to consider What repair is within my responsibility?

EAJB

049 Gliese 687

Red dwarf / About 14.8 light-years / 140.0 trillion kilometres

Gliese 687 is one of the collection's red dwarfs. Give this ordinary catalogue entry the attention you might give a more celebrated name. The symbolic narrative asks whether something valuable is already present in an overlooked part of daily life. [1]

Everyday Abundance

Notice what is useful and available before counting what is missing.

Attention can settle on absence so completely that existing resources disappear from view. This card invites a grounded inventory of time, skills, relationships and ordinary comforts. Appreciation does not deny difficulty. It helps you identify what can support the next step and what you might use more thoughtfully.

Suggested action List three resources already available to you.

Question to consider What do I have that I could use with more care?

050 Gliese 674

Red dwarf / About 14.8 light-years / 140.0 trillion kilometres

Gliese 674 is a red dwarf. Its place halfway through the deck is a useful human arrangement, not a property of the star. Pause here to consider a manageable adjustment instead of waiting for circumstances to become entirely different. [1]

A Manageable Change

Change is easier to learn from when you can observe its effects.

You may be tempted to alter everything at once. This card invites a smaller adjustment with a clear purpose. Choose one change, give it a reasonable trial and notice the result. If it helps, build on it. If it does not, you will have useful information without disrupting the whole arrangement.

Suggested action Try one small change to a routine for the next three days.

Question to consider Which change can I test clearly?

EAJB

051 LHS 292

Red dwarf / About 14.9 light-years / 141.0 trillion kilometres

LHS 292 carries a survey designation. An identifier lets an observer return to a particular object, even when its name is not memorable. The symbolic story asks which pressures are useful guides and which simply make the next step harder. [1]

Letting Go of Pressure

Some urgency belongs to expectations you can reconsider.

You may feel that every task must be completed immediately or perfectly. This card asks where that pressure comes from and whether it serves the actual situation. Keep genuine responsibilities in view, but question unnecessary demands. Reducing one unrealistic expectation can create space for better, more consistent work.

Suggested action Replace one perfectionist demand with a realistic standard.

Question to consider What pressure am I allowed to reduce?

052 Gliese 440 (LAWD 37)

White dwarf / About 15.1 light-years / 142.9 trillion kilometres

Hubble observations of LAWD 37 measured the deflection of light from a background star, allowing its mass to be estimated through gravitational microlensing. A subtle effect became measurable evidence. The symbolic narrative considers what remains after an ending. [9]

Thoughtful Closure

An ending deserves enough attention to leave you ready for what follows.

You may be moving on while loose ends continue to occupy your mind. This card invites a small closing ritual: finish a practical detail, record a lesson or say a needed goodbye. Closure does not require every emotion to disappear. It marks what has ended and what you choose to carry forward.

Suggested action Complete one loose end from a finished task or chapter.

Question to consider What would help me recognise that this part is complete?

EAJB

053 Gliese 1245 B

Red dwarf / About 15.2 light-years / 143.8 trillion kilometres

Gliese 1245 B is one of three Gliese 1245 entries in this deck. The component letter matters when distinguishing them. Its reflective narrative makes room for rest without treating rest as a failure to contribute. [1]

Rest as Preparation

A pause can support the work that still matters to you.

You may be treating rest as a reward that must wait until everything is done. This card invites you to see recovery as part of a sustainable rhythm. Choose a pause that actually refreshes you and give it a boundary. Returning with more capacity may be more useful than continuing without attention.

Suggested action Take a short break away from the activity that has tired you.

Question to consider What kind of rest would help me return well?

054 Gliese 876

Red dwarf / About 15.2 light-years / 143.8 trillion kilometres

Gliese 876 is a planet-hosting red dwarf roughly fifteen light-years away. Revision 4's value of 0.36 light-years was an error, not a nearby neighbour overlooked by astronomy. Correcting it gives this card an appropriate theme: turning an intention into something grounded. [10]

An Intention Made Practical

Turn a broad wish into something you can do today.

A goal may feel inspiring but remain too abstract to guide action. This card invites you to translate it into a specific behaviour, time and place. Keep the step within your control. Practical intention makes it easier to begin and easier to notice whether your effort is serving what you value.

Suggested action Write: today, at this time, I will take this one step.

Question to consider How can my intention become observable?

EAJB

055 Gliese 1245 A

Red dwarf / About 15.2 light-years / 143.8 trillion kilometres

Gliese 1245 A appears after B in the deck's established order. Card order is a publishing choice rather than a rule of stellar importance. The symbolic narrative considers the quiet role that keeps a shared task moving. [1]

The Quiet Role

Supportive work has value even when it is not the centre of attention.

You may be contributing from a less visible position and wondering whether it matters. This card invites you to assess the real effect of your work. Acknowledge its value while ensuring your needs and limits remain visible too. Being supportive should not mean disappearing from decisions that affect you.

Suggested action Name one useful contribution and one support you need in return.

Question to consider How can I support others without overlooking myself?

056 Gliese 1245 C

Red dwarf / About 15.2 light-years / 143.8 trillion kilometres

Gliese 1245 C completes the collection's Gliese 1245 group. Preserve its letter when using a catalogue or comparing the other cards. Its creative reflection concerns the agreements and habits that allow people to build on shared foundations. [1]

Shared Foundations

A common understanding makes separate efforts easier to coordinate.

You may be working alongside others without agreeing on the basics. This card asks you to establish a shared purpose, a few expectations and a way to communicate changes. Strong foundations need not be complicated. A short conversation now can prevent repeated confusion and make later differences easier to discuss.

Suggested action Agree on one shared expectation before continuing a joint task.

Question to consider What do we need to understand in the same way?

EAJB

057 LHS 288

Red dwarf / About 15.8 light-years / 149.5 trillion kilometres

LHS 288 is a red dwarf. Instead of asking this small entry to provide a dramatic revelation, let it accompany a practical question. The symbolic story asks whether a load could become lighter through a clearer arrangement or a request for help. [1]

Ease the Load

Simplifying a task can be wiser than trying harder.

You may have accepted a process with more steps than its purpose requires. This card invites you to identify the essential result and question the rest. Remove, combine or postpone a nonessential demand where appropriate. Making work simpler can preserve care and quality while reducing unnecessary strain.

Suggested action Remove one unnecessary step from a recurring task.

Question to consider What could be simpler without losing what matters?

058 Gliese 1002

Red dwarf / About 15.8 light-years / 149.5 trillion kilometres

Researchers reported two Earth-mass planets around Gliese 1002 using radial-velocity measurements. Their orbits make the system scientifically interesting, but a habitable-zone description does not establish life. The reflection below turns that measured curiosity toward simple foundations in daily life. [16]

Return to Basics

When a situation feels tangled, begin with what you can verify.

Confusion can grow when guesses are treated as facts. This card invites you to list what is known, what is uncertain and what must happen next. You need not solve every question immediately. A clear starting point makes it easier to choose the next piece of information or the next practical action.

Suggested action Separate facts from assumptions in one situation that concerns you.

Question to consider What do I actually know?

EAJB

059 Groombridge 1618

K type star / About 15.9 light-years / 150.4 trillion kilometres

Groombridge 1618 is a K-type star. Its spectral category is useful even without a famous cultural story attached to it. The symbolic narrative invites appreciation of competence that becomes visible through reliable work rather than an impressive introduction. [1]

Quiet Competence

Your developing skill deserves recognition even before it feels effortless.

You may judge your ability by how easy a task feels. Learning often remains awkward while progress is real. This card invites you to look for specific improvements and practise the part that still needs attention. Confidence can grow from evidence of competence rather than from waiting for discomfort to vanish.

Suggested action Compare a recent effort with an earlier one and name an improvement.

Question to consider Where am I becoming more capable?

060 Gliese 412 A

Red dwarf / About 16.0 light-years / 151.4 trillion kilometres

Gliese 412 A is represented separately from its B companion. The catalogue distinction is small but necessary. In the reflective story, a similarly small pause makes room to choose a response instead of letting the first impulse become the only one. [1]

Space to Respond

A pause can help you choose a response you will respect later.

You may be about to react from irritation or pressure. This card invites a short gap between what happened and what you do next. Consider the result you want, the limits you need and the words that fit. A pause is useful when it supports a clear response rather than endless avoidance.

Suggested action Draft a reply, then read it again before sending.

Question to consider What response serves my purpose?

EAJB

061 Gliese 412 B (WX Ursae Majoris)

Red dwarf / About 16.0 light-years / 151.4 trillion kilometres

WX Ursae Majoris is the alternative name used here for Gliese 412 B. Remembering both labels can help connect references. Its symbolic narrative concerns directing energy while preserving the boundaries that make sustained attention possible. [1]

Energy with Boundaries

Strong feeling becomes more useful when it has a safe direction.

Excitement, frustration or urgency may be asking for action. This card invites you to identify what the feeling is pointing toward without letting intensity set every rule. Choose an outlet that respects your limits and other people's needs. A deliberate step can carry energy further than an impulsive burst.

Suggested action Put your energy into one useful, bounded task.

Question to consider Where can this intensity become constructive?

062 AD Leonis

Red dwarf / About 16.2 light-years / 153.3 trillion kilometres

AD Leonis is a red dwarf. This entry asks the reader to begin with that astronomical identity and then enter a clearly symbolic reflection. The reflection concerns expressing a conviction in a way that still leaves room for listening and revision. [1]

Speak with Conviction

You can stand behind an idea while remaining open to correction.

You may be softening your view so much that it becomes difficult to understand. This card invites a clear statement supported by your reasons. Confidence does not require certainty about everything. Express what you think, explain what informs it and remain willing to learn from a thoughtful response.

Suggested action State one opinion clearly and give one reason for it.

Question to consider What do I believe strongly enough to say plainly?

EAJB

063 Gliese 832

Red dwarf / About 16.2 light-years / 153.3 trillion kilometres

Gliese 832 is a red dwarf. A catalogue can fix an identity on the page while the questions we bring to it change. This card's creative narrative asks what conditions would give a worthwhile possibility enough room to grow. [1]

Room for Growth

A little space around a commitment can help it develop well.

You may be packing a new habit or project into an already crowded schedule. This card invites you to consider what it needs to thrive: time, attention or a simpler starting scope. Growth is not only about adding effort. Sometimes it requires releasing a competing demand so the new work has a place.

Suggested action Make a small, protected space for a priority you want to grow.

Question to consider What needs room rather than more pressure?

064 Gliese 682

Red dwarf / About 16.3 light-years / 154.2 trillion kilometres

Gliese 682 is a red dwarf. There is no need to turn every nearby star into a record-holder to find it worth considering. The symbolic story takes a modest starting point and asks what becomes possible when limits are acknowledged honestly. [1]

Respecting Limits

A limit can provide useful information about how to proceed.

You may be frustrated by a constraint in time, resources or capacity. This card invites you to work with the real conditions before deciding they mean failure. Narrow the scope, change the timing or seek appropriate help. Respecting a limit can make a plan more workable than pretending it is absent.

Suggested action Revise one plan to fit your actual available time.

Question to consider What becomes possible when I accept the constraint?

EAJB

065 40 Eridani B

White dwarf / About 16.3 light-years / 154.2 trillion kilometres

40 Eridani B is a white dwarf. Its classification differs from those of the A and C entries in the same named system. The symbolic narrative treats difference as a reason to ask what experience has taught, rather than a reason to rank worth. [1]

The Value of Experience

What you have learned may be more useful than you realise.

An older skill or past effort may seem irrelevant to your present situation. This card invites you to look for a transferable lesson. You do not have to repeat the old method unchanged. Adapt what still works and acknowledge what circumstances now require. Experience can become a resource when it remains flexible.

Suggested action Choose one previous lesson that could help with today's task.

Question to consider Which part of my experience belongs here?

066 40 Eridani A (Keid)

K type star / About 16.3 light-years / 154.2 trillion kilometres

40 Eridani A, also called Keid, is a K-type star. The familiar name and catalogue designation lead to the same entry. Its reflective narrative concerns the practical supports of daily life, where an improvement can be modest and still matter. [1]

Build for Daily Life

A useful plan fits the ordinary days as well as the ideal ones.

You may have designed a routine around unusually high energy or perfect conditions. This card asks how it would work on an average day. Reduce friction and include a modest fallback. A plan that allows for real life can support consistency more effectively than one that depends on constant motivation.

Suggested action Create a shorter version of one routine for busy days.

Question to consider Can this plan work when life is ordinary?

EAJB

067 40 Eridani C

Red dwarf / About 16.3 light-years / 154.2 trillion kilometres

40 Eridani C is the red-dwarf entry in this three-card group. Read it beside A and B without confusing their classifications. The symbolic reflection asks how gentleness can remain active and purposeful when circumstances require a firm response. [1]

Gentleness with Strength

A considerate response can still protect what matters.

You may assume that firmness requires harshness. This card invites you to combine a clear position with a calm tone. State your limit or request without unnecessary blame. Gentleness does not guarantee agreement, but it can help you remain aligned with your values while addressing a difficult situation.

Suggested action Practise a firm request using simple, respectful language.

Question to consider How can I be steady without becoming harsh?

068 EV Lacertae

Red dwarf / About 16.5 light-years / 156.1 trillion kilometres

NASA's Swift satellite detected an exceptionally powerful flare from EV Lacertae in April 2008. The observation gives this small star an eventful scientific story. The creative reflection below concerns taking a pause when a strong reaction arrives. [17]

Before the Reaction

Notice the trigger before deciding what it demands of you.

A familiar situation may be prompting an automatic response. This card invites curiosity about the pattern. Identify what happened, what you felt and what choice is available now. You do not need to suppress the feeling. You can create a little room to respond according to the present rather than the habit.

Suggested action Name one trigger and one alternative response.

Question to consider What choice exists between the feeling and the action?

EAJB

069 EI Cancri B

Red dwarf / About 16.7 light-years / 158.0 trillion kilometres

EI Cancri B is distinguished from A by its component letter. Such a small addition can change which object an observer means. The symbolic story gives similar attention to an understated strength that may not announce itself loudly. [1]

Understated Strength

Something useful may be present without drawing attention to itself.

You may overlook a quality because it seems ordinary or quiet. This card invites you to notice patience, reliability or careful observation in yourself or someone else. Strength need not be dramatic to matter. Identify its practical effect and give it a role in the decision or task before you.

Suggested action Name one quiet strength and use it deliberately today.

Question to consider What valuable quality have I taken for granted?

070 70 Ophiuchi B

K type star / About 16.7 light-years / 158.0 trillion kilometres

70 Ophiuchi B is a K-type component represented alongside A in this collection. The separate entries invite separate attention. In the symbolic narrative, making room for another person begins with a practical adjustment rather than an assumption about their needs. [1]

Making Room for Another

Listening well includes leaving space for a different experience.

You may be approaching a discussion with a solution already prepared. This card invites you to hear the other person's account before deciding what they need. Their priorities may differ from yours. Understanding the difference can make your help more appropriate and your agreement, if one is reached, more meaningful.

Suggested action Ask an open question and let the person finish before responding.

Question to consider What have I not yet heard?

EAJB

071 70 Ophiuchi A

K type star / About 16.7 light-years / 158.0 trillion kilometres

70 Ophiuchi A is the companion entry to card 70. Read the two profiles with the same care you give their different reflections. This card asks what equal consideration would look like in a decision that affects more than one person. [1]

Equal Consideration

Your perspective deserves a place beside the perspectives of others.

You may be letting confidence or seniority decide whose view matters. This card invites you to contribute what you know without assuming it settles everything. A fair discussion considers the relevant evidence and the people affected. Make your contribution clear enough to be assessed rather than leaving it unspoken.

Suggested action Bring one relevant observation into a shared decision.

Question to consider What perspective can I add?

072 Altair

A type star / About 16.7 light-years / 158.0 trillion kilometres

Altair's rapid rotation gives it an oblate, rather than spherical, shape. Measurements distinguish its equatorial and polar dimensions. The familiar picture of a star as a perfect round disc is therefore only an approximation in this case. [18]

Widening Horizons

A broader view can help you choose your next direction.

You may be caught in the details of a task and losing sight of its purpose. This card invites a moment of perspective. Consider what the work serves, what alternatives exist and what you want to learn. Expanding your view should inform the next practical step rather than become another way to postpone it.

Suggested action Review one goal and choose a step that serves its larger purpose.

Question to consider What am I trying to reach through this effort?

EAJB

073 EI Cancri A

Red dwarf / About 16.7 light-years / 158.0 trillion kilometres

EI Cancri A is the other EI Cancri component in this deck. Its later card number does not imply a later stage of stellar life. The creative narrative asks how warmth can be expressed in an ordinary contact or conversation. [1]

Warmth in Contact

A simple, sincere gesture can renew a connection.

You may be waiting for a special occasion or the perfect words to reach out. This card invites ordinary contact with someone you value. Keep it free of demands and allow the other person their own timing. A brief message, shared memory or small invitation can open a door without forcing closeness.

Suggested action Send a kind greeting to someone you would like to reconnect with.

Question to consider Which connection would I like to care for?

074 Gliese 3379

Catalogued nearby star / About 17.0 light-years / 160.8 trillion kilometres

Gliese 3379 appears in the supplied deck list at an approximate distance of seventeen light-years. This edition does not assign an independently verified size to it. The reflective story begins with resourcefulness: what can you do with the information and materials actually available? [0]

Resourceful Thinking

A constraint may invite a different method rather than an abandoned aim.

You may be facing a shortage of time, materials or assistance. This card asks you to separate the goal from the way you expected to achieve it. Look for an appropriate alternative using what is available. Resourcefulness works best when it remains honest about quality, safety and the limits of the substitute.

Suggested action List two alternative ways to approach a constrained task.

Question to consider Which method can change while the purpose stays clear?

EAJB

075 Gliese 445

Red dwarf / About 17.1 light-years / 161.8 trillion kilometres

Voyager 1's long-term path brings it into the wider neighbourhood of Gliese 445. NASA describes a distant future passage rather than an arrival or landing. The association offers a scientific setting for reflecting on progress beyond the timescale of immediate results. [19]

Steady Movement

Regular movement can turn a distant aim into a visible process.

You may be waiting for a large block of time before continuing. This card invites a repeatable step instead. Decide what can be done in the time you usually have. Small sessions become useful when they connect to a clear aim and you occasionally review whether the direction still fits.

Suggested action Schedule one short session for a goal you want to maintain.

Question to consider What step could I repeat without exhausting myself?

076 WISEA J154045.67-510139.3

M6 dwarf / About 17.4 light-years / 164.6 trillion kilometres

The AllWISE motion survey identified WISEA J154045.67-510139.3 as an M6 dwarf and investigated its nearby distance. The long designation preserves its position. Discovery here depended on noticing movement in existing observations rather than on a familiar name. [20]

Curiosity without Certainty

You can stay interested while admitting what you do not know.

An unfamiliar subject may tempt you to accept a quick explanation. This card invites a slower, more open approach. Ask where information comes from and distinguish possibility from evidence. Curiosity does not require immediate belief. You can enjoy exploring a question while keeping your conclusions provisional and your decisions grounded.

Suggested action Write one question and identify a reliable way to investigate it.

Question to consider What can remain an open question for now?

EAJB

077 Gliese 3323

Catalogued nearby star / About 17.5 light-years / 165.6 trillion kilometres

Gliese 3323 is one of the named objects retained from the deck reference list. Its approximate distance identifies the setting, not the meaning of the card. The symbolic narrative asks you to allow an emotion some space before deciding what it requires. [0]

Emotional Space

You can make room for a feeling without letting it occupy everything.

A strong emotion may be colouring the whole day. This card invites you to acknowledge it and attend to a small part of life that remains manageable. You do not need to force a change of mood. Giving the feeling space alongside an ordinary action can help the day become less all-or-nothing.

Suggested action Name your feeling, then complete one gentle, practical task.

Question to consider What can I do while allowing this feeling to be here?

078 Gliese 526

Red dwarf / About 17.7 light-years / 167.5 trillion kilometres

Gliese 526 is a red dwarf. Its brief catalogue identity provides a stable point to which an observer can return. The reflective story concerns gathering scattered information so that a decision rests on a more complete view. [1]

Gathering the Pieces

A clearer picture may emerge when you organise what you already know.

You may be searching for more information before reviewing what you have. This card invites you to collect the relevant details in one place. Look for gaps, contradictions and a possible next step. Organisation will not create certainty, but it can show which question genuinely needs attention and which part is ready for action.

Suggested action Make a short overview of one situation using facts and open questions.

Question to consider What becomes clearer when I bring the pieces together?

EAJB

079 Stein 2051 B

White dwarf / About 17.0 light-years / 160.8 trillion kilometres

Hubble observations measured the apparent shift of a background star's light as Stein 2051 B passed nearby in the sky. This gravitational-lensing measurement helped determine the white dwarf's mass. The symbolic reflection concerns finding the essential lesson within a complicated experience. [21]

The Essential Lesson

One useful lesson may matter more than an exhaustive explanation.

You may be replaying an experience in search of complete understanding. This card invites you to identify what can guide your future behaviour now. Some questions may remain unanswered. A practical lesson allows you to move forward without pretending the whole situation has been resolved or reducing it to a single simple story.

Suggested action Write one lesson and one action it suggests.

Question to consider What have I learned enough to use?

080 Stein 2051 A

Red dwarf / About 17.0 light-years / 160.8 trillion kilometres

Stein 2051 A is the redder stellar companion in Hubble's view of the Stein 2051 system. The image distinguishes it from the white dwarf B. The reflective story considers the value of support that remains dependable while attention is drawn elsewhere. [21]

Stable Support

Notice the dependable support that helps you manage ordinary life.

Something consistent may have become nearly invisible through familiarity. This card invites appreciation for a routine, person or resource that makes your day easier. Consider how to maintain it without taking it for granted. Dependability grows through care too, and acknowledging it can clarify what deserves continued attention.

Suggested action Thank someone or maintain one resource you regularly rely on.

Question to consider What supports me so consistently that I overlook it?

EAJB

081 Gliese 251

Red dwarf / About 18.2 light-years / 172.2 trillion kilometres

Gliese 251 is a red dwarf. Its catalogue entry offers no shortcut to the patient work of observation. The symbolic narrative below brings that patience into an ordinary skill, where a repeatable practice can be more useful than one exceptional effort. [1]

Patient Practice

Improvement becomes more visible when practice has a clear focus.

You may be repeating a task without knowing which part you are trying to develop. This card invites deliberate practice on one manageable skill. Set a small aim, try it and note what changed. Progress does not require every session to feel successful; it benefits from attention, repetition and occasional useful feedback.

Suggested action Practise one specific skill for ten minutes.

Question to consider Which part of my practice deserves focused attention?

082 LP 816-60

Red dwarf / About 18.3 light-years / 173.1 trillion kilometres

LP 816-60 is a red dwarf with a survey-style designation. A less familiar name can still identify an object worth returning to. The creative reflection concerns a small act of courage that has a clear purpose and a manageable boundary. [1]

Small Acts of Courage

An everyday act can strengthen your willingness to participate.

You may be holding back from a question, invitation or contribution that matters to you. This card invites one proportionate step. Choose something respectful and within your capacity. You cannot guarantee the response, but you can recognise the value of acting in alignment with your interests and values rather than only your hesitation.

Suggested action Ask one question or make one modest invitation you have delayed.

Question to consider What small act would help me take part?

EAJB

083 Gliese 205

Red dwarf / About 18.6 light-years / 176.0 trillion kilometres

Gliese 205 is a red dwarf. Consider its entry as a reminder to give an ordinary subject a fair share of attention. The symbolic story asks where generosity would be most useful if expressed as time, curiosity or careful listening. [1]

Generous Attention

Care begins with noticing what is actually in front of you.

You may be distracted while trying to offer support or appreciate a moment. This card invites a short period of undivided attention. Look, listen and let the situation reveal itself before you decide what it needs. Generosity can take the form of presence, especially when your attention is offered without an agenda.

Suggested action Give one person or activity ten minutes of your full attention.

Question to consider Where would my attention make a difference?

084 Gliese 229 A

Red dwarf / About 18.8 light-years / 177.9 trillion kilometres

Gliese 229 A is the host star associated with the famous brown dwarf Gliese 229 B. Work published in 2024 resolved that companion into two brown dwarfs. A seemingly familiar system still had an important distinction waiting to be recognised. [22]

Protect What Matters

Something valuable may need a practical safeguard.

You may be assuming that an important habit, relationship or piece of work will remain secure without attention. This card invites a simple protective action. Back up a file, reserve time or clarify an expectation. Protection is useful when it reduces a real vulnerability and supports continued engagement with what you value.

Suggested action Take one practical step to protect something important.

Question to consider What deserves more deliberate care?

EAJB

085 Sigma Draconis (Alsafi)

G type star / About 18.8 light-years / 177.9 trillion kilometres

Sigma Draconis is also known as Alsafi. Its G spectral class places it in the same broad category as the Sun without making it an identical object. The reflective story uses the idea of orientation to consider what guides a present decision. [1]

Finding Orientation

A clear priority can help you navigate competing demands.

You may be receiving several requests that all feel urgent. This card invites you to identify the value or responsibility that should guide your choice. Check any real deadlines, then decide what deserves attention first. A guiding priority will not remove every conflict, but it can make your reasoning clearer and easier to communicate.

Suggested action Order today's tasks by importance and actual timing.

Question to consider What will guide me when demands compete?

086 Ross 47 (Gliese 213)

Red dwarf / About 18.9 light-years / 178.8 trillion kilometres

Ross 47 and Gliese 213 are two designations for the same entry in this deck. Recognising the alias prevents us from counting one object twice. Its symbolic narrative concerns a pace chosen thoughtfully instead of borrowed from someone else's urgency. [1]

A Thoughtful Pace

You can slow a decision without losing your intention to act.

You may feel pressured to choose before you understand the situation. This card invites you to distinguish useful urgency from unnecessary haste. Find out what time is available and what information matters. A considered pace includes a next step or decision point, so reflection supports movement instead of becoming indefinite delay.

Suggested action Set a realistic time to review a decision after gathering one key fact.

Question to consider What pace does this decision actually need?

EAJB

087 Gliese 570 A

K type star / About 19.2 light-years / 181.6 trillion kilometres

Gliese 570 A is a K-type star. The B and C entries appear later in the collection, preserving separate identities within the named group. Its reflective story asks what needs care at the centre of a shared undertaking. [1]

Care for the Centre

Give attention to the central commitment before adding another layer.

You may be expanding a project while its most important part remains under-supported. This card invites you to identify the essential function or promise. Make it dependable before taking on more. Growth can become easier when the centre works well, and restraint can protect the quality of what you already offer.

Suggested action Improve the most important part of one current commitment.

Question to consider What is at the centre of this work?

088 Gliese 693

Red dwarf / About 19.2 light-years / 181.6 trillion kilometres

Gliese 693 is a red dwarf. The simple classification is enough to begin a careful description without adding a dramatic claim. The symbolic narrative makes a similar invitation: find a choice that can be understood and carried out without needless complication. [1]

Simpler Choices

Reducing unnecessary options can free attention for a meaningful decision.

You may be tired from comparing variations that make little practical difference. This card invites you to define a few useful criteria and eliminate what does not meet them. Simplification should serve your needs rather than hide a relevant trade-off. A smaller set of sound options can make choosing more manageable.

Suggested action Choose three criteria for a decision and narrow the options.

Question to consider Which differences actually matter?

EAJB

089 Gliese 754

Red dwarf / About 19.3 light-years / 182.6 trillion kilometres

Gliese 754 is a red dwarf. Let its modest catalogue entry accompany a practical assessment rather than a demand for certainty. The creative story concerns a measured risk whose possible consequences have been considered before the first step. [1]

A Measured Risk

A new step becomes more manageable when you understand its limits.

You may be considering something unfamiliar and treating uncertainty as either danger or excitement. This card invites a practical assessment of the likely benefit, possible cost and ways to limit exposure. Choose a reversible trial where possible. Courage and caution can work together when both serve a considered purpose.

Suggested action Identify a small trial and a clear limit for one new idea.

Question to consider What would make this experiment proportionate?

090 Gliese 908

Catalogued nearby star / About 19.3 light-years / 182.6 trillion kilometres

Gliese 908 remains one of the hundred identities in the supplied deck. The approximate distance is a guide to the setting, not a complete physical portrait. The reflective narrative asks which connection deserves a simple, deliberate act of maintenance. [0]

Keep the Connection

A small point of contact can support continuity during a busy period.

You may have less time for a person or project than you would like. This card invites a modest act that keeps the connection alive without pretending you can offer more. A brief update, short check-in or manageable return can be enough for now. Be honest about your capacity and intentions.

Suggested action Make one brief, sincere check-in where contact has become sparse.

Question to consider What connection can I maintain realistically?

EAJB

091 Gliese 752 A

Red dwarf / About 19.3 light-years / 182.6 trillion kilometres

Gliese 752 A is the first of the deck's two Gliese 752 components. A name shared with another entry is a reason for precision, not confusion. The symbolic story considers the strength of something familiar that has been cared for over time. [1]

Strength in Familiarity

Something familiar may be a resource rather than a sign of stagnation.

You may be seeking novelty while overlooking a method that still works. This card invites you to examine a trusted practice on its merits. Keep what serves your present needs and adapt what no longer fits. Familiarity can offer a steady base from which to explore, provided it remains a choice rather than an unquestioned habit.

Suggested action Use one dependable method and review why it helps.

Question to consider What familiar resource still supports me?

092 Gliese 588

Red dwarf / About 19.3 light-years / 182.6 trillion kilometres

Gliese 588 is a red dwarf. Its place in a reference list does not require a hurried response from the reader. The creative narrative invites an unhurried kind of care, especially where a situation may improve through attention rather than pressure. [1]

Unhurried Care

Care sometimes asks for patience more than immediate intervention.

You may want to improve a situation before you understand its needs. This card invites observation and a measured response. Ask what would actually help, and notice whether doing less would allow useful space. Patience does not mean ignoring a real problem; it means matching your action to the situation rather than your discomfort.

Suggested action Ask what kind of help is wanted before offering it.

Question to consider When would a slower response be more considerate?

EAJB

093 Gliese 752 B (VB 10)

Very cool red dwarf / About 19.3 light-years / 182.6 trillion kilometres

Gliese 752 B is also called VB 10. Its classification marks it as a very cool red dwarf. The symbolic story uses that small stellar identity to ask whether a quieter voice has been given a genuine opportunity to be heard. [1]

The Smallest Voice

A quiet need deserves attention before it becomes overwhelming.

You may have been dismissing a concern because it seems minor beside larger demands. This card invites you to hear it properly. Name the need and identify a proportionate response. Small concerns do not all require major changes, but listening early can prevent unnecessary strain and help you understand your priorities more accurately.

Suggested action Respond to one small need you have repeatedly postponed.

Question to consider What quiet request have I been ignoring?

094 Eta Cassiopeiae A (Achird)

G type star / About 19.3 light-years / 182.6 trillion kilometres

Eta Cassiopeiae A is the G-type component in this pair of deck entries. The spelling Achird is used here for its common name. Its reflective narrative concerns confidence that can welcome another person's contribution without feeling diminished. [1]

Gracious Confidence

You can take your place without diminishing anyone else's.

You may hesitate to claim credit or express a strength because you fear seeming arrogant. This card invites accurate recognition. Name what you contributed and acknowledge the contributions around you. Confidence becomes more grounded when it rests on specifics rather than comparison, allowing you to participate with both clarity and generosity.

Suggested action Describe one achievement honestly, including any help you received.

Question to consider Can I recognise my value without making it a contest?

EAJB

095 Gliese 570 B

Red dwarf / About 19.2 light-years / 181.6 trillion kilometres

Gliese 570 B follows the system's A entry while keeping its own identity. A component letter is part of the scientific name, not an award or ranking. The symbolic story concerns learning alongside somebody whose way of working is different from yours. [1]

Learning Side by Side

Shared learning allows people to contribute without having every answer.

You may be waiting for an expert to resolve a situation that could benefit from collaborative enquiry. This card invites a clear question and a shared attempt to investigate it. Each person can bring a different observation. Keep track of what is established and what remains tentative so learning leads to a useful next step.

Suggested action Explore one question together and compare what each person notices.

Question to consider What could we learn by thinking together?

096 Gliese 570 C

Red dwarf / About 19.2 light-years / 181.6 trillion kilometres

Gliese 570 C completes this deck's three Gliese 570 entries. Their separate pages of reflection offer a way to consider connection without sameness. Here, the question is how to remain in a shared undertaking while making a distinct contribution. [1]

Different but Connected

Belonging does not require identical roles or experiences.

You may feel out of place because your contribution differs from those around you. This card invites you to assess whether the group respects difference and whether your role serves your needs. Connection can include distinct strengths. Give your contribution a clear place while remaining honest about any changes that would help you participate well.

Suggested action Name your particular contribution to a shared effort.

Question to consider How can my difference become a useful part of the whole?

EAJB

097 Eta Cassiopeiae B

K type star / About 19.3 light-years / 182.6 trillion kilometres

Eta Cassiopeiae B is the K-type counterpart to the A entry. The scientific distinction is useful before any symbolic story is added. The creative reflection asks how you might make room for another person's needs without losing sight of your own. [1]

Room for the Other

Understanding grows when you allow another person their own pace.

You may be expecting someone to respond as quickly or in the same way as you. This card invites you to clarify what you need while allowing reasonable space for a different process. Waiting should not require abandoning your own boundaries. Agree on a next contact or decision point where one is needed.

Suggested action Clarify an expectation and agree on a realistic time to revisit it.

Question to consider What can I allow without losing my own needs?

098 36 Ophiuchi A

K type star / About 19.4 light-years / 183.5 trillion kilometres

36 Ophiuchi A begins the final three-card group in the collection. Its component letter preserves its identity within the named system. The symbolic narrative asks what common ground could support a practical next step between people with different priorities. [1]

Common Ground

A shared value can provide a starting point for a difficult discussion.

You may be focused on the point of disagreement while overlooking a purpose you both care about. This card invites you to name that purpose honestly. Common ground will not settle every difference, but it can guide the tone and scope of the conversation. Begin there and keep the practical disagreement visible.

Suggested action Identify one value shared with someone whose view differs from yours.

Question to consider What do we both want to protect?

EAJB

099 36 Ophiuchi B

K type star / About 19.4 light-years / 183.5 trillion kilometres

36 Ophiuchi B continues that group with a separate identity. A shared name need not collapse every difference into one description. The creative story considers independence within cooperation, where responsibility is clearer when each person can speak for themselves. [1]

Independent Together

A strong connection can make room for separate choices.

You may be confusing closeness with doing everything alike. This card invites you to consider where independence would support rather than weaken the relationship. Discuss expectations and practical effects, then allow space for distinct interests or methods. Autonomy works best when it is paired with honest communication about what remains shared.

Suggested action Make room for one separate preference within a shared plan.

Question to consider Where would more independence help our connection?

100 36 Ophiuchi C

K type star / About 19.4 light-years / 183.5 trillion kilometres

36 Ophiuchi C closes the deck in its established card order. Ending a collection does not mean ending the questions it raises. Its symbolic narrative invites you to bring one useful observation into daily life and leave room for further discovery. [1]

Bringing It Together

Bring the lesson into ordinary life through one clear action.

You may have gathered insights without deciding how to use them. This card invites integration: choose what matters, connect it to your current situation and take a practical step. You do not need to apply everything at once. One thoughtful action can show which lessons are useful and which still need further reflection.

Suggested action Choose one insight from this week and act on it today.

Question to consider What am I ready to put into practice?

EAJB

Editorial record

Revision 5 adds the remaining ninety entries and gives all one hundred cards a consistent profile, astronomical introduction, reflection, action and question. Reflections follow the existing EAJB Oracle texts so that the book and website use the same themes.

Corrections and presentation choices

Gliese 876: the erroneous 0.36 light-years in Revision 4 is replaced by about 15.2 light-years. NASA places the star at approximately fifteen light-years, and the older RECONS parallax is consistent with this scale. [1, 10]

Wolf 424 A and B: the inconsistent legacy values are replaced by the same coarse system distance, about 14.3 light-years, using the older RECONS system parallax. Stein 2051 A and B use about 17 light-years, consistent with the cited Hubble material. [1, 21]

Other paired and multiple components share an intentionally rounded system-scale distance in this edition. Small differences in the supplied list were not treated as precise measurements of component separation. These harmonised values remain approximate; they are not a new astrometric solution.

The name Achird replaces the earlier spelling Achirid. Highly precise kilometre columns and unverified stellar sizes are omitted to avoid suggesting greater accuracy than the sources support. The legacy distance for the AllWISE entry is rounded to 17.4 light-years and retained as a deck value; the 2014 discovery source supplies its classification, not a current distance certification.

Remaining limits

The supplied list is not independently certified as the nearest one hundred individual stars. Distances and stellar properties change with new measurements and catalogue choices. In particular, the neutral profiles for Gliese 3379, Gliese 3323 and Gliese 908 do not assert independently checked classifications. Consult a current catalogue for research or technical use. [0, 2]

A source number supports the astronomical identity or stated observation; it does not support the accompanying personal reflection. Some linking sentences and all interpretations are original explanatory or creative writing.
